FLEXIBILITY SERVICES IN
THE DISTRIBUTION **GRID**

Info. about FLEXIGRID project

- Budget: 8.541.073,00€
- Type of Action: IA -Innovation action
- Duration: 48 months (1/10/2019 – 30/09/2023)
- Coordinator: CIRCE
- Number of partners: 15

CROATIA	HEP-ODS, UNZIG-FER
ITALY	LINKS, EDYNA
BELGIUM	CEDEC
FRANCE	CAP
SPAIN	VIESGO, CIRCE, ZIV, ORMAZABAL, ATOS, UNICAM
GREECE	VERD, IOSA, HYPERTECH

FLEXIGRID - Project Objectives

INTEROPERABLE

SOLUTIONS FOR

IMPLEMENTING HOLISTIC

FLEXIBILITY SERVICES IN

THE DISTRIBUTION **GRID**

FLEXIGRID – Project Objectives

The **main goal** of FLEXIGRID is to allow the distribution grid to operate in a **secure and stable** manner when a **large share of variable generation electricity sources** is connected to low and medium voltage grids.

To do so, FLEXIGRID proposes a three-level approach aiming at **(1) Flexibility, (2) Reliability, and (3) Economic Efficiency** through the development of innovative hardware and software solutions.

These solutions will be demonstrated in **four Demo-Sites** across Europe ensuring their interoperability through its integration into an open source platform able to harmonize the data flow between FLEXIGRID solutions and the real grid.

INTEROPERABLE
SOLUTIONS FOR
IMPLEMENTING HOLISTIC
FLEXIBILITY SERVICES IN
THE DISTRIBUTION **GRID**

FLEXIGRID – Project Objectives

FLEXIGRID Specific Goals

- ✓ **Goal 1:** To improve the **power system flexibility** by enhancing the grid **hosting capacity** of RES through DR, P2X, storage of electricity and variable generation towards the energy network **decarbonization**
- ✓ **Goal 2:** To increase the **observability, controllability** and **automation** of the network systems for the improvement of both the **security** and **resilience** of the grid
- ✓ **Goal 3:** To **mitigate** short-term and long-term **congestions** in the distributed grid from an economic efficient point of view thus reducing the cost of the European energy transition
- ✓ **Goal 4:** To ensure the **interoperability** and **compatibility** of the developed **solutions** with the different platforms used by the European DSOs guaranteeing a proper and secure **data management**

INTEROPERABLE
SOLUTIONS FOR
IMPLEMENTING HOLISTIC
FLEXIBILITY SERVICES IN
THE DISTRIBUTION **GRID**

FLEXIGRID – Project Objectives

FLEXIGRID Specific Goals

- ✓ **Goal 5:** To carry out a complete **demonstration** program up to TRL 8 in four different demo-sites, obtaining reliable results on its **replicability** and ensuring its attractiveness for European stakeholders
- ✓ **Goal 6:** To identify and analyze the **needs** and **shortfalls** of the distribution grid as well as the **obstacles** to innovation under the current local and international context and regulation framework
- ✓ **Goal 7:** To raise **awareness** among **citizens** and other relevant **stakeholders** of the transition towards a **low carbon economy** considering them as an **active player** in the energy system
- ✓ **Goal 8:** To ensure the **exploitation** of the project results by developing a corresponding **business plan** as well as their **dissemination** by exchanging knowledge with other projects under the BRIDGE Initiative

FLEXIGRID – Solutions, use cases & Demo sites

FLEXIGRID - Solutions

S1

Secondary
Substation of the
future

S2

Smart meters with
feeder-mapping
capabilities

S3

Protections for high
RES penetration

S4

Energy Box

S5

Software module for
fault location and
self-healing

S6

Software module for
forecasting and grid
operation

S7

Software module for
congestion
management

S8

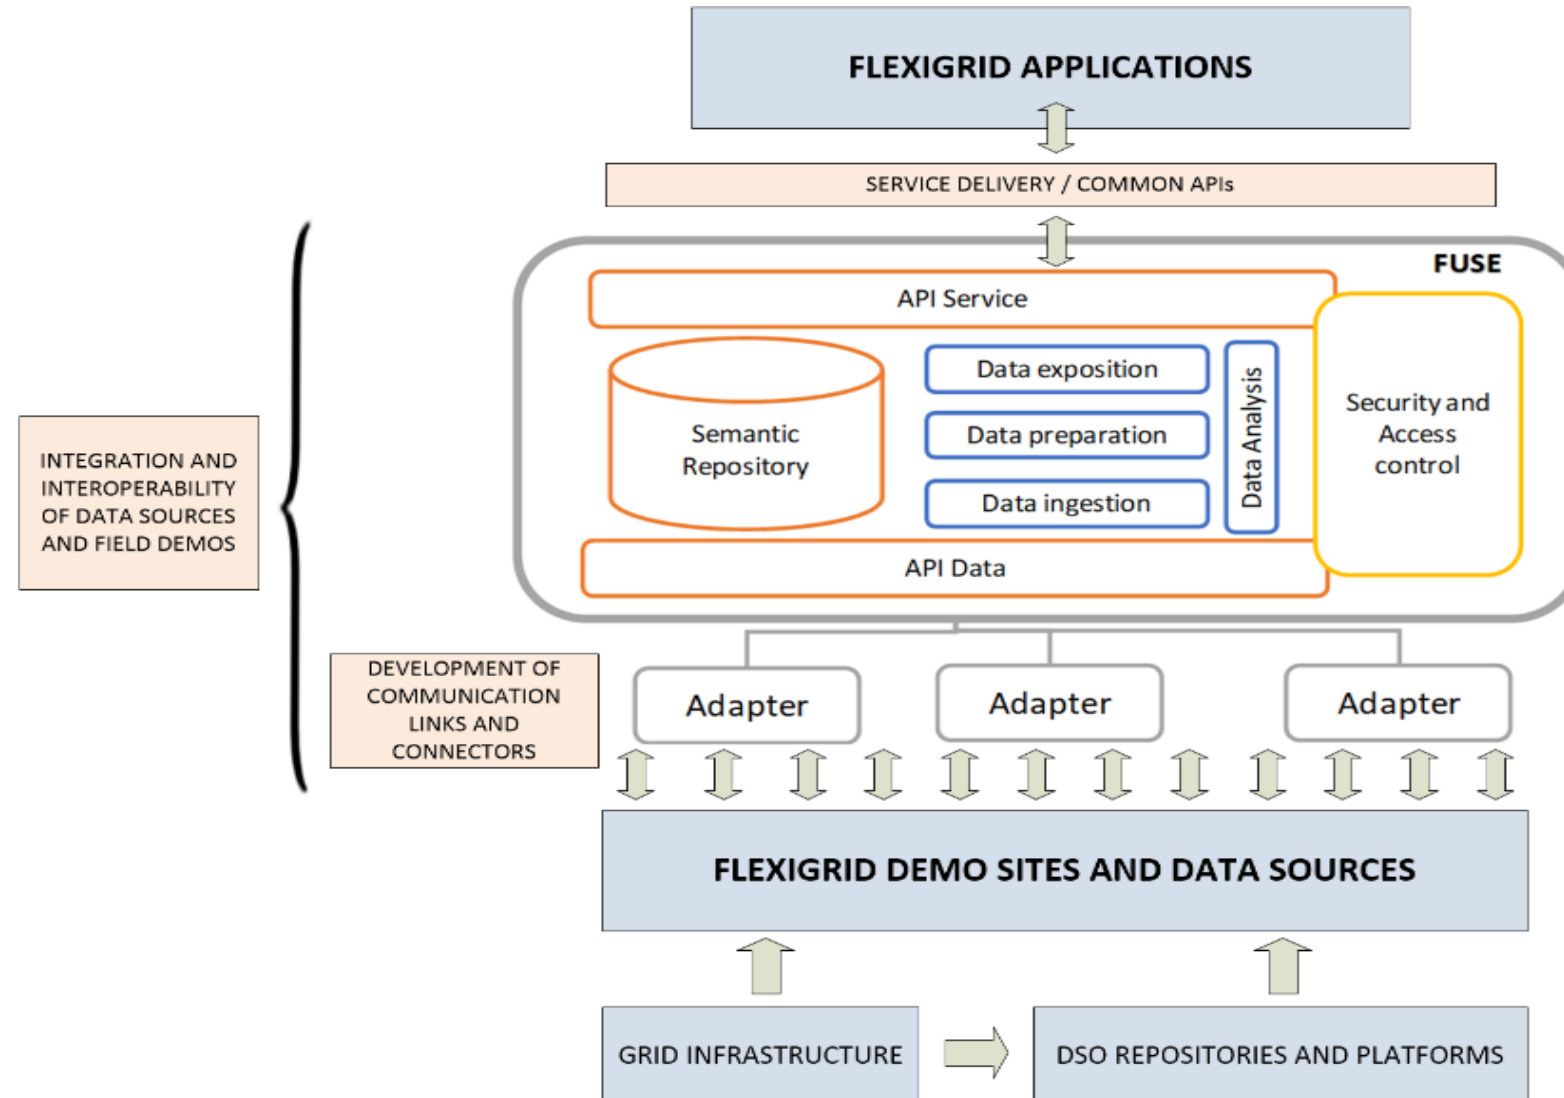

Virtual thermal
energy storage
model

S9

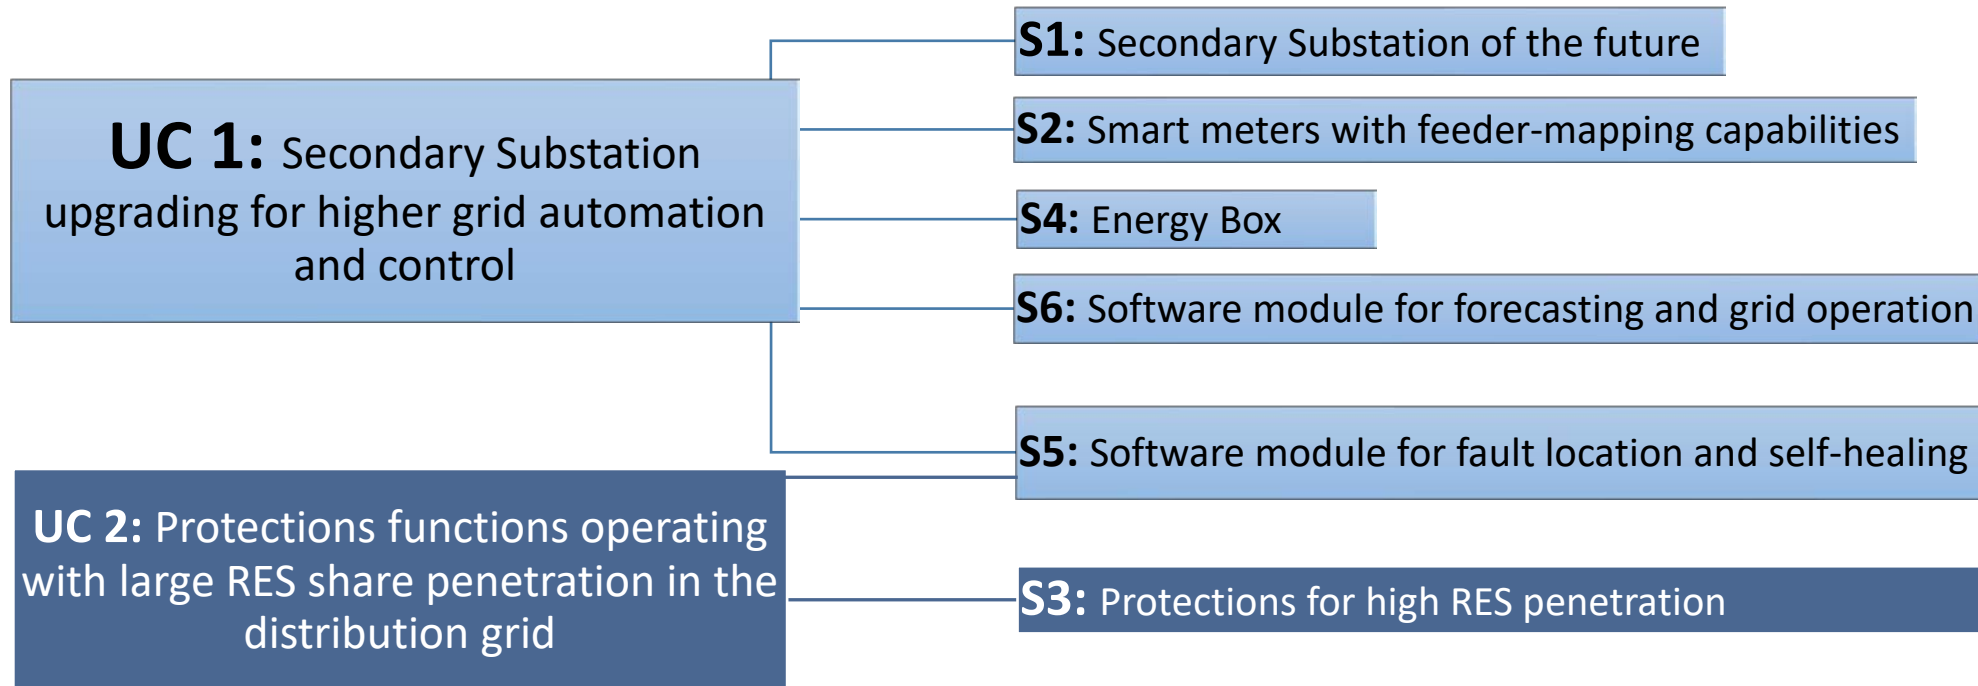

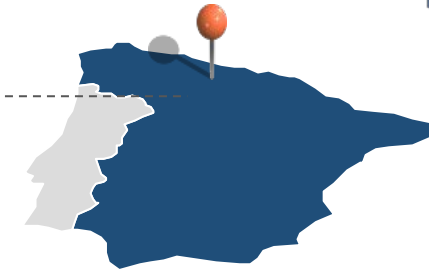

Fuse
Platform

FLEXIGRID - Solutions

FLEXIGRID – Use Cases & Demo Sites

Demo No. 1 - SPAIN

FLEXIGRID – Use Cases & Demo Sites

Demo No. 2 - GREECE

UC 3: Holistic energy system optimization & emulation for commercial and residential customers

S6: Software module for forecasting and grid operation

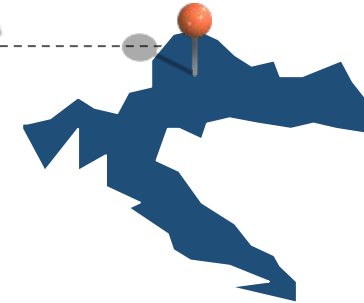

S4: Energy Box

UC 4: Microgrid congestion management and peak shaving

S7: Software module for congestion management

FLEXIGRID – Use Cases & Demo Sites

Demo No. 3 - CROATIA

UC 5: Coordinating
distribution network
flexibility assets &
protections schemes in urban
districts

S3: Protections for high RES
penetration

S5: Software module for fault location and
self-healing

S7: Software module for congestion
management

UC 6: Virtual Energy Storage for urban
building

S6: Software module for forecasting and grid operation

S8: Virtual thermal energy storage model

FLEXIGRID – Use Cases & Demo Sites

Demo No. 4 - ITALY

UC 7: Dispatching platform for MV generation

S1: Secondary Substation of the future

S2: Smart meters with feeder-mapping capabilities

S4: Energy Box

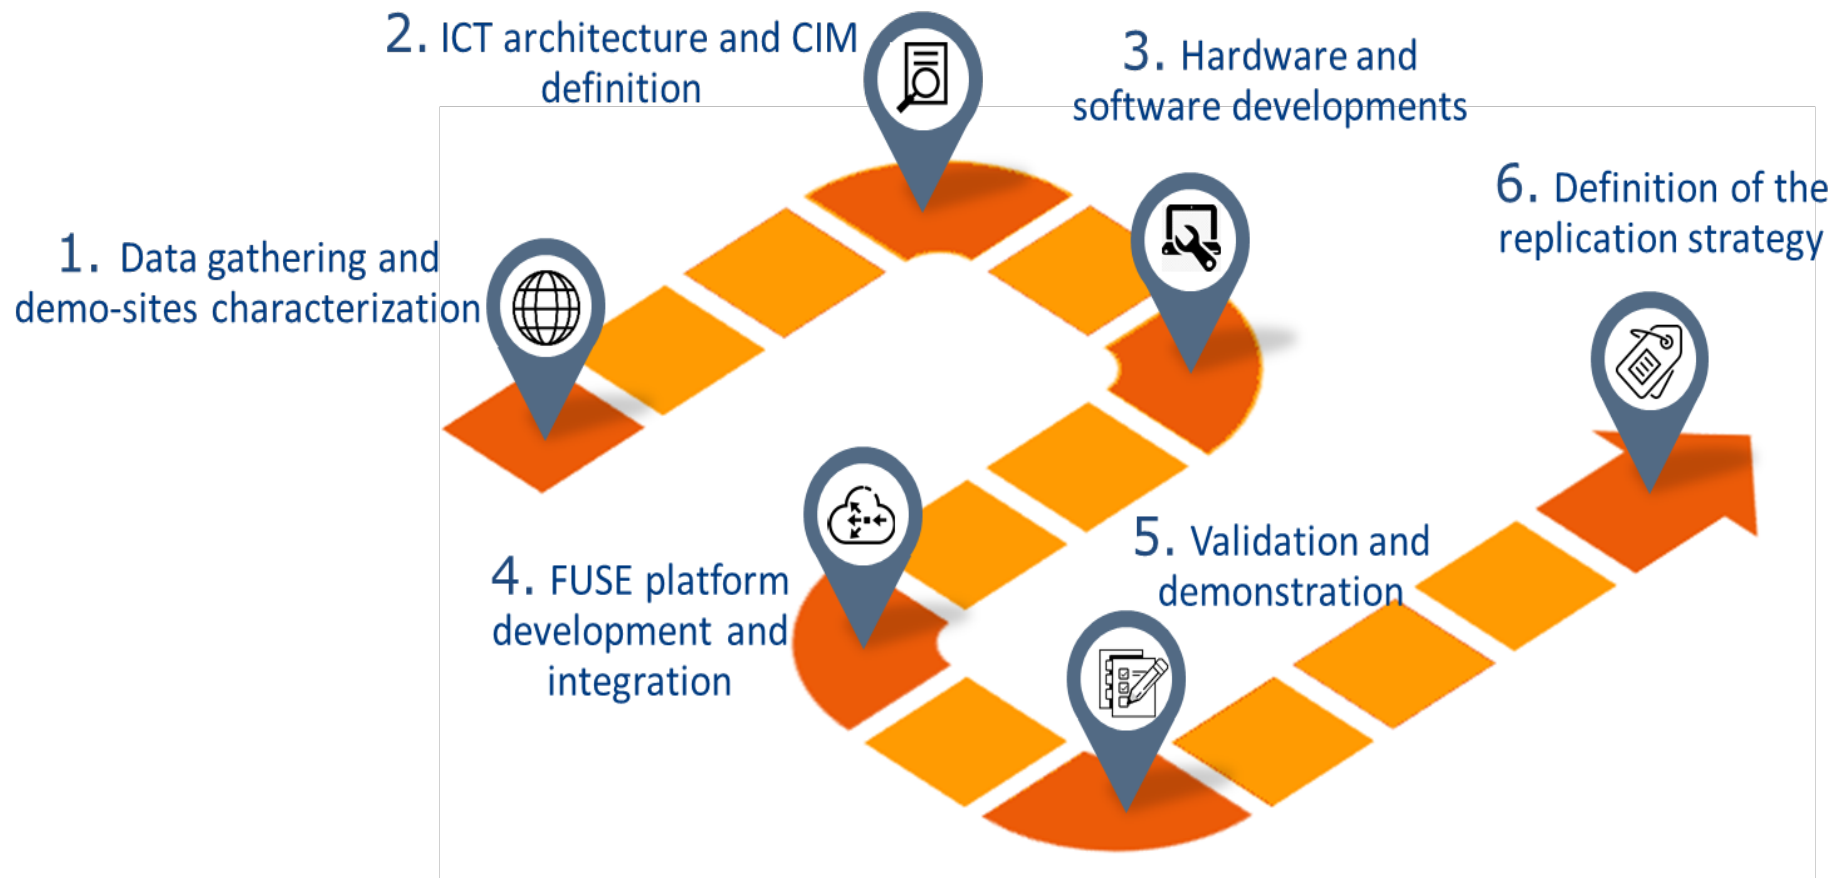

S6: Software module for forecasting and grid operation

UC 8: Mountainous valley grid operating in island mode

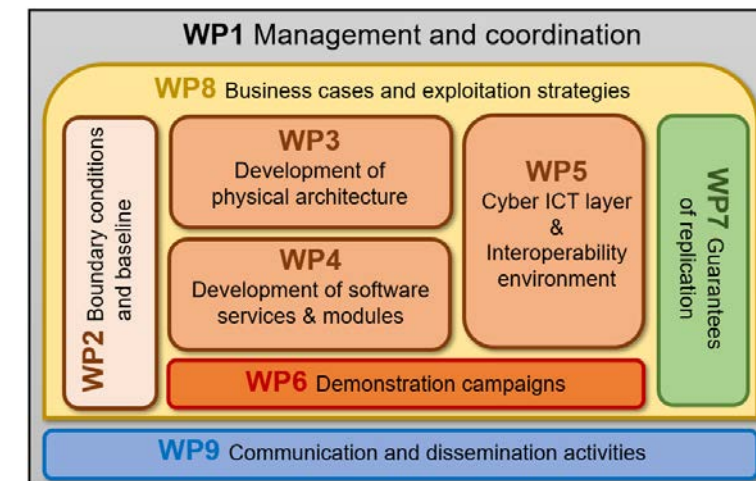

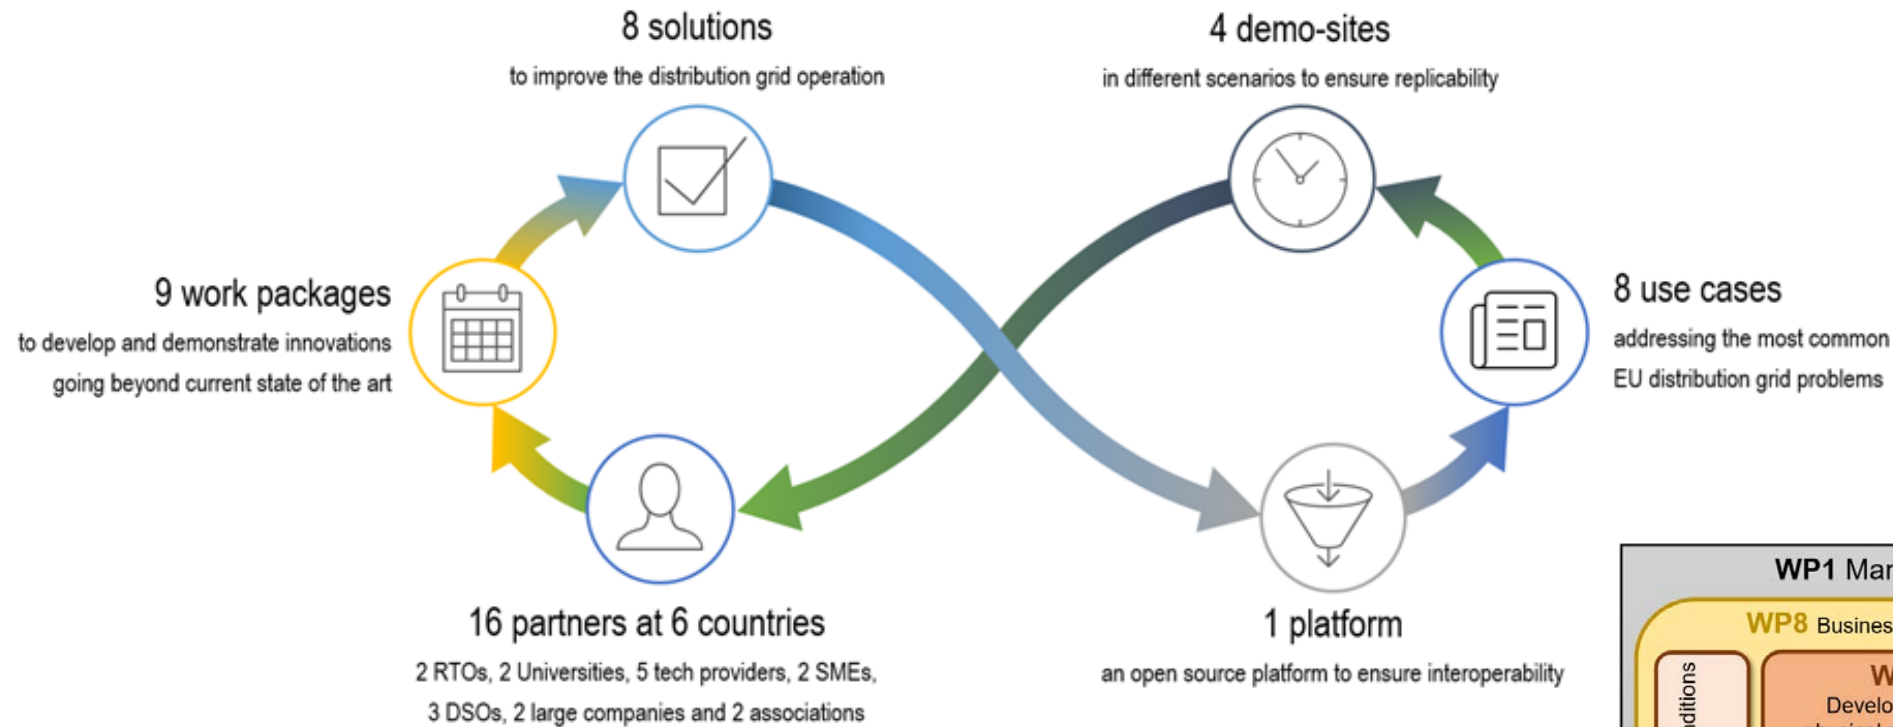

S5: Software module for fault location and self-healing
